

IES Warehouse System

Streamline your warehouse operations

Nowhere is total integration more important than with your warehouse operations.

The IES Warehouse module provides complete visibility of all receiving, put-away, assembly and load operations to your staff and management teams whether they're located in the next building, downtown or across the country.

Working with IES is simple. Cargo can be keyed in with complete shipment records and cargo details, including disbursements, OS&D, purchase order, commercial invoice, part number, cargo pick-up and hazardous material notations as well as warehouse location and receiving status. Use existing bookings to auto-populate the cargo information on warehouse receipts. Planned flight, vessel and consolidation scheduling are shared with complete flexibility of allocating on-hand freight to a container.

At-a-glance compare open allocation quantities to purchase order quantities by the purchase order number and SKU. Know if you have sufficient purchase order quantities and open allocations.

Build load plans for international and domestic shipments. Integration with operations modules lets you add load plans to bills of lading or air waybills.

To facilitate tracking and speed operations shipment information can contain location details available for the row, rack and slot. Customers can easily track their shipments and assembly projects by their reference number, pro number, container ID or purchase order.

Built-in reports keep management aware of customer activity and inventory onhand as well as improve cash flow by highlighting unbilled warehouse receipts.

Enjoy faster cycle times and noticeable improvements to customer service. By dynamically tracking your inventory and eliminating duplicate data entry, you will lower your operating costs.

Automation without the time and cost of a lengthy development and implementation process.

Key Benefits

- *Track warehouse inventory and organize domestic and international shipments*
- *Share vital information with your customers and agents*
- *Generate and distribute warehouse receipts with put-away information*
- *Keep track of your assembly projects*
- *Enjoy faster cycle times and lower operating costs*
- *Integration with IES Air Export, Ocean Export and Accounting reduces effort and opportunities for mistakes*
